

VISIONARY STAIRCASES
AND PREMIER INTERIOR DOORS

INTERIOR DOORS

Leading the frameless door market for over 15 years, Insensation is specialized in this technology and has developed products for specific markets in the USA and Europe.

Our Interior Frameless Swing, (IFS) and our Interior Frameless Pocket (IFP) cover a wide range of modern solutions for high-end architecture.

With references throughout the USA and Europe, our doors accept either single or double-plated drywall boards in both USA and European standard thicknesses.

This is advanced door technology, with extremely strong mounting brackets, highest quality hinges and gaskets and available in a huge range of colors.

We sell lacquered or primed door leaves and jambs, pre-milled for hinges and lockcase, ready for installation and individually protected for shipment to your building site.

OPTIONS

Door cores come in standard honeycomb or tubular versions. Tubular is comparable to solid core, but allows us to achieve greater heights with a slightly reduced weight.

Concealed 3D **hinges** are available in aluminum color, black or white.

All our doors are standard delivered in a white matt **lacquer**. We also can lacquer them in any RAL color. A wide range of real oak veneers is also available.

ENTRANCE DOORS

European Entrance Doors offer a unique alternative to traditional wooden or fiberglass doors. The doors are available in hinged or exclusive pivot versions. In addition to frameless aesthetic, we offer a wide range of wood, glass, concrete and metal finishes. Our armored entrance doors are certified in burglar, soundproofing and heat insulation categories.

Each entrance door is custom made in single, double, with left and/or right and/or top fixed panels.

The integrated handle option on our pivot doors is the ultimate luxury.

High-security biometric security options are available for all our entrance doors.

A REVOLUTIONARY, NEW CONCEPT IN STAIRCASE DESIGN

STEPS

We offer 3 step shapes, and multiple colors and materials.

The **wing** step is a natural anodised wing-shaped step, like on an airplane. It is only available in natural anodisation, not colors. The step has a recessed black rubber insert to prevent slipping.

The **triangle** step is also a natural anodised aluminum step, with repeating ridges which create a very robust anti-skid surface. This step is often chosen for high-traffic areas or by families with children.

The **slab** step is our most customisable. It is manufactured using a very strong anodised aluminum frame, and can have inserts of any color glass, natural stone, wood or aluminum slabs. It is also available naked and you can insert your own material. This step is available in any anodisation color.

ARCHITECTS DESIGN

Our staircases are normally specified by architects and installed by general contractors in the USA. In Europe and other countries, we work either with architects or directly with building owners. Please feel free to contact us.

BUILDING REGULATIONS

All our glass railings meet building codes. Our stairs can be made code-compliant by adding our 'safety' bars placed high and discrete under each step.

SUSTAINABILITY

All our stringers are massive 10 mm brushed, anodised aluminium. The unique composition in the aluminum allows us to achieve strengths equal to steel, but with a fraction of the weight, making installation much easier.

More and more contractors, millworkers and designers are asking for parts of our exclusive doors, stairs and hardware – to build their own design.

We are pleased to offer you ARCHIPLANE™ – a new way to buying frameless doors frames, pocket door kits, magnetic locks, digital locking solutions, stair treads, glass railings and door hardware – all at trade pricing.

UNIQUE DOOR HARDWARE

Unique, high-quality, aesthetic door levers, locks and accessories, designed and manufactured in Europe. Twenty-Six years of design and manufacturing experience guarantee you a long-lasting result.

In addition to door hardware, we are innovative experts in interior and entrance doors – frameless doors and pocket doors for every budget.
